Amerivent and MetalBest DV Venting Approved for Travis Products

American Metal Products and Selkirk Hearth Products independently contracted with Omni Test Labs to perform the testing and evaluations necessary to obtain SAFETY APPROVAL and LISTINGS of their direct vent systems for use on Travis Industries direct vent gas appliances. All of these tests were performed in a laboratory environment. These tests proved American Metal Products ("Ameri-Vent") and Selkirk Hearth Products ("Direct-Temp") direct vent systems have met all of the safety requirements outlined in the test standards for direct vent appliances.

Travis Industries will change the installation instructions in all of our direct vent appliances to show the Ameri-Vent and Direct-Temp venting systems as acceptable, along with the Dura-Vent system we have always listed. We will not specify individual components for any of the brands, as this information is easily obtained from your venting supplier.

Please note: There may be several vent caps available within a vent manufacturer's line. Whenever faced with a choice, always select the high-wind cap. Questions about venting performance in the field should be directed to the manufacturer of the venting.

I believe this wider selection of approved vent system will prove to be a great convenience to our dealers.

Warm regards,

Perry Raney
National Sales Manager
